

NAMIT SINGH SARNA

MSc AI for Business Transformation, Aston · BSc Computer Science, First Class, Leicester

Birmingham, UK | namitmec@gmail.com | [LinkedIn](#) | [GitHub](#) | [Portfolio](#)

PROFILE

First Class Computer Science graduate, now on Aston University's MSc in AI for Business Transformation, with Capgemini as industry partner. Built AI systems and shipped web platforms, including a production site for a paying client, and now studying the other half of the problem: how organisations adopt AI, govern it and measure what it changes. On the winning team at the International Student Consultancy Challenge 2025. Seeking 2027 graduate roles in digital transformation, AI strategy and technology consulting.

EDUCATION

MSc AI for Business Transformation | Aston University, Birmingham 2026 – 2027

One-year full-time programme; industry partner Capgemini

- **Core modules:** Leadership for Transformational Change; Digital and Business Transformation; Responsible AI and the Governance of Emerging Technologies; Value Creation and Business Impact with AI; Managing Projects; Artificial Intelligence for Business; Predictive Analytics.

BSc Computer Science, First Class Honours | University of Leicester 2023 – 2026

- **Dissertation:** UniWise, a source-grounded AI assistant for students (see Projects).
- **Modules:** Foundations of AI; Big Data and Predictive Analytics; Software Architecture; User Interface Design; Databases and Domain Modelling; Internet and Cloud Computing.

EXPERIENCE

AI Education and Digital Transformation Micro-Internship | University of Leicester July 2025

- Worked in a cross-disciplinary team exploring how generative AI can be used responsibly in higher education.
- Led the technical work: built learning-assistant prototypes and supported teammates without a computing background through engineering decisions and delivery.
- Contributed to the team's recommendations on AI adoption, academic integrity and student-centred digital transformation.

Freelance Web Developer | [Cloud Seven Realty](#) 2025 – 2026

Solo client project for a real estate business

- Owned the client's digital platform end to end, from planning through launch and handover.
- Built it around three things the client's buyers care about: verified titles, local presence and curated listings, rather than a generic listings template.
- Set up a Google Sheets and Google Drive workflow so the non-technical team updates listings and images themselves, with no developer and no redeploy.
- Made it mobile-first, since most of the market's traffic is on phones, and handed over documentation for long-term upkeep.

Student Representative | University of Leicester May 2025

- Selected to represent Indian students during the official visit of Dr Venkatachalam Murugan, Consul General of India to the UK.
- Took part in a roundtable with university leadership on the international student experience and collaboration.

AWARDS AND PUBLICATIONS

- **Winners, International Student Consultancy Challenge 2025.** Co-led the Global Career Navigator pitch for international students.
- **Meritorious Team Award, CMS Mathematical Modelling Competition 2025.** Led a Newsvendor inventory model that supported pricing and output recommendations.
- **Contributor, [ClassFutures guidance on responsible generative AI use in studies](#),** covering academic integrity, critical thinking and ethical adoption.

- **PWN2PLAY Silicon Siege CTF, De Montfort University, 2025.** Worked across OSINT, cipher analysis, LFSR and geolocation challenges; finished on 2030 points.

SELECTED PROJECTS

UniWise: source-grounded AI assistant | [GitHub](#)

Dissertation, 2025 – 2026

- Built an assistant that answers only from lecture material and cites the source of every answer, because general-purpose chatbots answer confidently even when the answer is not in the course.
- Designed it to refuse rather than guess: a confidence threshold rejected every out-of-scope question in evaluation (precision, recall and F1 of 1.0 across four configurations on a 30-question benchmark).
- Model-agnostic: runs on OpenAI's hosted models or on local Ollama models, so data can stay on local hardware where it needs to.
- A telemetry dashboard clusters student questions (K-Means) to show module-level patterns. 52 automated tests, 84% coverage.

Crime Data Analysis and Prediction | [GitHub](#)

Coursework, 2026

- Cleaned and aggregated 1M+ Metropolitan Police records into area-by-month panels with pandas and NumPy.
- Compared Linear Regression, Decision Tree and Random Forest models on R^2 , RMSE, MAE and 10-fold cross-validation, and used K-Means to group neighbourhoods by crime profile.

Course Companion Web App | [GitHub](#)

Group project, 2025

- Delivered login, dashboard and progress-tracking features over two Agile sprints: around 40% of the codebase and 40+ GitLab commits. Wrote the shared CSS across 15+ pages.

SKILLS

- **Transformation:** stakeholder engagement, requirements and scoping, AI adoption and responsible AI, designing workflows for non-technical users, documentation and handover, Agile delivery.
- **Data and AI:** Python, SQL, pandas, NumPy, scikit-learn, regression and clustering, retrieval-augmented generation (RAG), embeddings, LLM APIs (OpenAI, Ollama), evaluation design.
- **Technology:** React, Next.js, TypeScript, FastAPI, Spring Boot, Docker, Kubernetes, Git.
- **Currently learning:** Power BI.
